NVD Driving Written Exam

AN/PVS-14 · M1075A1 PLS · AR 600-55 · TC 21-305-2 · AR 385-10 · TC 21-60

Name: _____

Rank / Unit: _____

Date: _____

Score: _____

Circle the best answer for questions 1–28. Answer questions 29–30 in complete sentences. Passing score: _____%.

1. AR 600-55 is the:

A. Army Driver and Operator Standardization Program
B. Army Safety Program
C. Visual Signals manual
D. Night Vision Goggle Driving training program

2. Before starting NVD driver training on the PLS, a Soldier must:

A. Complete the night practical
B. Own a PVS-14
C. Be licensed on the M1075A1
D. Have 100 hours of night driving

3. Where is a driver's NVD qualification recorded?

A. DA Form 2404
B. DD Form 2977
C. It is not recorded
D. On the operator license record, DA Form 5984-E

4. Which publication is the training program for night vision goggle driving?

A. TC 21-60
B. TC 21-305-2
C. AR 385-10
D. DA Pam 750-8

5. True or False: If you are licensed on the PLS in daylight, you are qualified to drive it on NVDs.

A. True
B. False

6. The AN/PVS-14 field of view is about:

A. 40 degrees
B. 20 degrees
C. 90 degrees
D. 180 degrees

7. When focusing the PVS-14, the correct order is:

A. Objective focus, then diopter
B. Focus on the dashboard first
C. Only the objective focus is needed
D. Diopter, then objective focus

8. Which is NOT part of PVS-14 operator PMCS?

A. Check the battery and carry a spare
B. Inspect the lenses for cracks, scratches, and dirt
C. Shine a flashlight into the objective lens to test it
D. Confirm the mount locks securely

9. White light in the cab will:

A. Improve the NVD image
B. Wash out the image and ruin the unaided eye's dark adaptation
C. Only affect the A-driver
D. Have no effect if it is brief

10. "Overdriving your goggles" means:

A. Wearing NVDs for too long
B. Turning the gain up too high
C. Using the IR illuminator while driving
D. Driving faster than you can stop within the distance you can detect hazards

11. Because the PVS-14 is a monocular, depth perception is poor. In convoy you should:

A. Keep the increased interval from the convoy brief
B. Close up so you don't lose the vehicle ahead
C. Turn on headlights
D. Follow the IR markers as close as possible

12. An oncoming vehicle's headlights cause blooming. You should:

A. Stare at the lights until the tube adjusts
B. Turn off your NVD
C. Look away, hold your lane, and slow down
D. Speed up to pass quickly

13. During NVD driving, the assistant driver or vehicle commander should:

A. Sleep to stay fresh for the next shift
B. Also wear NVDs, call hazards, and watch the right side
C. Navigate with a white-light map
D. Drive the vehicle from the right seat

14. Army safety policy (AR 385-10) calls for a ground guide when:

A. Only on public roads
B. Only in daylight
C. Only when the driver asks
D. A tactical vehicle backs up

15. When backing, the ground guide should stand:

A. Directly behind the vehicle in its path
B. Between the vehicle and the nearest obstacle
C. At the driver's-side rear corner, visible in the driver's mirror
D. On the passenger side, out of the mirror

16. If the driver loses sight of the ground guide, the driver must:

A. Stop immediately and wait
B. Honk and continue
C. Keep backing slowly
D. Turn on the white headlights

17. Without NVDs, a night ground guide should use:

A. Unfiltered white flashlights aimed at the driver's eyes
B. Two flashlights with filtered lenses or lighted wands
C. IR chemlights only
D. No lights at all

18. IR chemlights and IR-filtered wands can be seen by:

A. Only people looking through NVDs
B. Everyone
C. Only the ground guide
D. Only in fog

19. On the PLS, the area the driver cannot see at all is:

A. The driver's door
B. The front bumper
C. Directly behind the flatrack
D. The left mirror

20. Who can give the STOP signal to a backing vehicle?

A. Only the designated ground guide
B. Only the vehicle commander
C. Only the driver
D. Anyone who sees a hazard

21. Ground-guide signals through a 40-degree tube should be:

A. Small and quick
B. Large, slow, and inside the driver's view
C. Given only with one hand
D. Given from behind the vehicle

22. An IR flashlight aimed straight at the driver's PVS-14 will:

A. Bloom and wash out the image
B. Help the driver see the guide
C. Have no effect
D. Recharge the battery

23. Why keep your unaided (naked) eye dark-adapted while wearing a monocular?

A. To read the speedometer in white light
B. To reduce battery use
C. It isn't necessary
D. So you can still see if the device fails or for the mirrors

24. Full dark adaptation of the unaided eye after exposure to white light takes about:

A. 10 seconds
B. 1 minute
C. 30 minutes or more
D. It never recovers

25. The PVS-14 is a sensitive item. This means:

A. It can be left in the vehicle overnight
B. It must be accounted for by serial number at all times
C. It does not need to be signed out
D. It is a consumable

26. Your NVD fails while you are driving. Your first actions are:

A. Take both hands off the wheel to fix it
B. Turn on the white dome light
C. Speed up to reach the halt
D. Hold the wheel steady, slow down, tell the crew, and stop safely

27. Which conditions reduce what the PVS-14 can show you?

A. Low illumination (no moon, heavy overcast)
B. Dust, fog, smoke, or heavy rain
C. Both A and B
D. Neither; NVDs see through everything

28. To manage fatigue during NVD driving, you should:

A. Follow the driver rest plan, rotate drivers when allowed, and speak up
B. Drink energy drinks and keep going
C. Drive faster to finish sooner
D. Turn the NVD gain to maximum

29. List three things the driver and ground guide agree on in the brief before moving.

30. Explain why following distance and closing speed are hard to judge on the PVS-14, and what you do about it.
